Academic Year: 2026-2027			
Program: Computer Engineering			
Year of Study	Second Year	Semester	III
Course Name	Skill Based Lab - III (Web Technology II)	Course Code	CMLOR2VS201
Name	Tanmay Nilesh Shinde	Roll No	67
Class & Div & Batch	SYCM1-B	PRN No.	126BTCM2008

Experiment No: 2	
Aim	Implement a live clock and calendar using JavaScript DOM methods
Learning Outcome	Utilize JavaScript DOM manipulation to create real time interactive components.
Program	<!DOCTYPE html> <html> <head> <title>Live Clock and Calendar</title> </head> <body> <h2>Live Clock</h2> <h1 id="clock"></h1> <h2>Calendar</h2> <h3 id="month"></h3> <table border="1" cellpadding="10"> <tr> <th>Sun</th> <th>Mon</th> <th>Tue</th> <th>Wed</th> <th>Thu</th> <th>Fri</th> <th>Sat</th> </tr> <tbody id="calendar"></tbody> </table>

```
<script>
    function displayClock() {
        var today = new Date();

        document.getElementById("clock").innerHTML =
            today.toLocaleTimeString();
    }

    setInterval(displayClock, 1000);
    displayClock();

    var today = new Date();

    var year = today.getFullYear();
    var month = today.getMonth();

    var firstDay = new Date(year, month, 1).getDay();
    var lastDate = new Date(year, month + 1, 0).getDate();

    var months = ["January", "February", "March", "April",
        "May", "June", "July", "August",
        "September", "October", "November", "December"];

    document.getElementById("month").innerHTML =
        months[month] + " " + year;

    var calendar = "";
    var date = 1;

    for (var i = 0; i < 6 && date <= lastDate; i++) {
        calendar += "<tr>";

        for (var j = 0; j < 7; j++) {
            if (i == 0 && j < firstDay) {
                calendar += "<td></td>";
            }
            else if (date <= lastDate) {
                if (date == today.getDate()) {
                    calendar += "<td style='background-color:yellow'><b>" + date
+ "</b></td>";
                }
                else {
                    calendar += "<td>" + date + "</td>";
                }
                date++;
            }
            else {
                calendar += "<td></td>";
            }
```

```
        }

        calendar += "</tr>";
      }

      document.getElementById("calendar").innerHTML = calendar;
    </script>

</body>

</html>
```

Output

Review Questions

Q1. Write a program to select all elements with the class "item" and change their background color to "Yellow".

Ans :

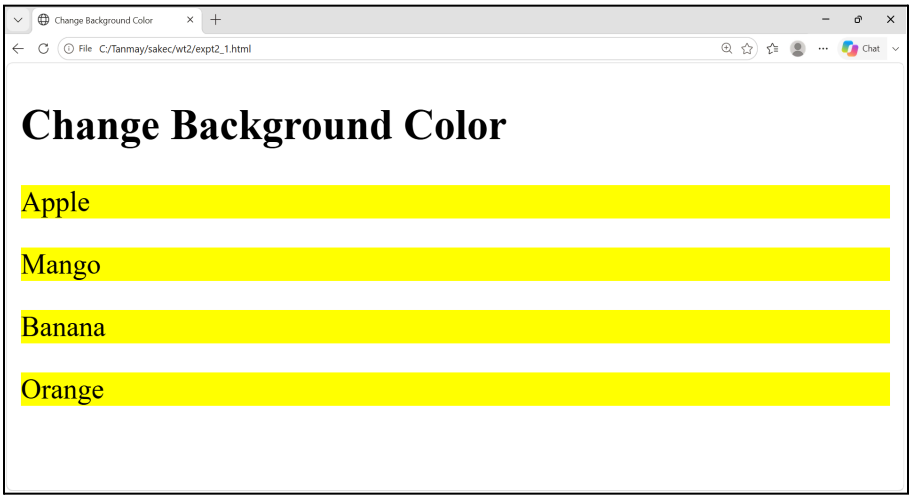

```
<!DOCTYPE html>
<html>
<head>
  <title>Change Background Color</title>
</head>
<body>
  <h2>Change Background Color</h2>

  <p class="item">Apple</p>
  <p class="item">Mango</p>
  <p class="item">Banana</p>
  <p class="item">Orange</p>

  <script>
    var items = document.querySelectorAll(".item");

    items.forEach(function (item) {
```

```
        item.style.backgroundColor = "Yellow";
    });
  </script>
</body>
</html>
```

Q2. Write a program to display weekdays using Date() object .

Ans :

```
<!DOCTYPE html>
<html>

<head>
  <title>Display Weekday</title>
</head>

<body>

  <h2>Current Weekday</h2>

  <p id="result"></p>

  <script>
    var days = ["Sunday", "Monday", "Tuesday",
      "Wednesday", "Thursday", "Friday", "Saturday"];

    var today = new Date();

    var weekday = today.getDay();

    document.getElementById("result").innerHTML =
      "Today is: " + days[weekday];
  </script>
</body>
</html>
```

	
Conclusion	Successfully implemented a live clock and calendar using JavaScript DOM methods and performed DOM manipulation and weekday display using the Date object.
